

1. INTRODUCTION TO APEIRON MOBILITY

OVERVIEW OF APEIRON MOBILITY

Apeiron Mobility was founded in 2016 with the vision of changing the future of the transport industry. As sustainability of current transport infrastructure relies solely on the ability to acquire fossil fuels, finding a sustainable way to be able to transport anything or anyone is very important.

At Apeiron Mobility, they focus on maintaining, developing and producing all the technology in-house. This allows complete control over all the procedures and great foundations for a brighter future. A big portion of the resources are also utilized on ensuring that the technology available is sustainable and can have a basis for all the future products.

Apeiron Mobility is a startup currently funded by SINE-IIT Bombay and Intel. This allows for a high availability of resources and access to technology and a network of people who are pioneers in their field. This provides huge insights about the industry, such as the future, deep technical aspects and many more resources which are invaluable.

Apeiron Mobility also takes great interest in ensuring the longevity of all the hardware and software produced which is a very important aspect of any consumer or enterprise product.
